

HASSAN AMIR

+358449527076 hassanamir1degree@gmail.com Finland

PROFILE

Full Stack Developer with 2+ years of experience building scalable, real-world applications. Skilled in Python, JavaScript, C#, React, Node.js, and Azure, with hands-on expertise in AI chatbot automation and full-stack development. Experienced in delivering robust solutions, working with databases, DevOps practices, and modern software architectures, with a strong focus on clean code and problem-solving.

AREA OF EXPERTISE

JavaScript - TypeScript - React.js - Node.js - C# - n8n - MySQL - Python - NumPy - Pandas - Matplotlib - Seaborn - Scikit-learn - Data Analysis - Azure DevOps

PROFESSIONAL EXPERIENCE

Full Stack Software Developer

Lahti - Finland
04 / 2026 - present

Peikko Finland Oy

- Developed a cloud-based engineering platform for precast wall design using C# (.NET/Blazor) and React with TypeScript, delivering scalable and responsive full-stack solutions
- Designed and implemented RESTful APIs to integrate BIM/FEM systems, enabling efficient processing of DWG, PDF, and structured engineering data
- Built and optimized complex structural and mathematical calculation logic, including load and force analysis for high-performance computation
- Utilized Azure DevOps for CI/CD pipelines and managed optimized SQL databases within a scalable Microsoft Azure cloud environment

Ai Automation Engineer

Lahti - Finland
12 / 2025 - 04 / 2026

Kimbtron Oy

- Design and orchestrate AI agents using n8n, integrating APIs and implementing advanced chatbot logic for automated workflows
- Develop scalable full-stack applications using Python, React, JavaScript, and MySQL, ensuring efficient data handling and system performance
- Integrate and deploy AI-driven solutions within web platforms
- Collaborate within agile development teams to deliver clean, maintainable, and production-ready code

EDUCATION

Bachelors of engineering industrial information and technology

Lahti - Finland
08 / 2025 - present

LAB University of Applied Sciences

- Relevant Courses: Programming, Algorithms, Data Structures, Object Oriented Programming, Software Engineering, Embedded system, Devops, Data Pipelines

Bachelors of information and technology - Cross-Institutional Courses

Helsinki - Finland
08 / 2025 - present

Metropolia University of Applied Sciences

- Relevant Courses: React.js Fundamentals, Introduction to Artificial Intelligence

PROJECTS

AI Dashboard for CSV Data Analysis

Lahti - Finland
Oct 2025 – Nov 2025

Independent Project

- React.js, TypeScript, JavaScript (ES6+), CSV data handling, AI/ML models, state management, real-time dashboards, full-stack architecture
- Live demo → <https://react-dashboard09.netlify.app/>
- Source code → <https://github.com/HassanAmir454/react-dashboard>

Web Developer

Espoo- Finland
Sep 2025 - Present

Finnish Pakistani Friendship Organization

- FPFO is a non-profit cultural organization promoting Finland–Pakistan friendship. Developed and maintained its website with responsive design, managing events, announcements, and digital content to support community engagement.<https://fpfo.fi/>

COURSES

Python for Data Science, AI & Development

2026

Coursea

- Learn Python basics like syntax, variables, data types, and string operations, then apply logic using conditions, loops, functions, and classes. Use libraries like Pandas and NumPy in Jupyter Notebooks, and work with web data through APIs (requests) and web scraping (BeautifulSoup).

SKILLS

Strong communication
Time management
Independent leadership
Creative problem-solving
Cross-cultural teamwork

LANGUAGE

English - Professional (fluent)
Finnish - A2
